

The only real remedy to the financial catastrophe

The deficits of the states and the bank losses are increasing tremendously. In a very short time, states and banks will become insolvent and savers (depositors and investors) will lose almost all their money.

The indebtedness of states has always been covered by taxes and bank or private loans. But the enormous losses the savers have undergone because of virtual financial investments (made up operations) and the recessive crisis of real economy prevent private subjects from lending more money and enterprises and workers from keeping paying taxes to the states.

For these reasons, the global financial system both public and private collapses provoking also the bankruptcy of the real economy enterprises and the breakdown of all countries' stock exchanges, in the west as in the east.

To try and stop the breakdown, the states issue new bonds and banks create enormous amounts of new currency from nothing, causing a very strong loss of purchase power in all legal tender currencies.

The only remedy to face this situation is the adoption of new currency representing work and guaranteed by real value. [Dhana](#) was issued in 2001 foreseeing exactly what's happening. [Dhana](#) is the world currency guaranteed by capitals of enterprises for a nominal value equal to one gram of platinum for each [Dhana](#). Together we can.
